Touch T6.7: Mac-based Multi-Touch Solution

Written by Bob Snyder
01 April 2013

~sedna's **Touch T6.7** is the first high-end, completely Mac-based multi-touch solution, says the maker. .

This 67"multi-touch comes with a secondary vertical display to provide a huge workspace with plenty of room for teamwork and collaboration. The one-of-a-kind system offers Dual Mac Pro performance with a professional look and complete reliability.

Touch T6.7 can be used in almost any professional field.

Did you see this at ISE? You would have had to look at the stand of **BLiNKBLIiNK** where in addition to the selection of multi-touch systems and software, their stand also offered a demo setup powered by the Mac-based digital signage software suite, the
