Other World Computing (OWC) announces a 12TB capacity option for the Mercury Elite Pro Dual line of dual-bay external storage solutions, making part of the OWC Thunderbolt interface storage product family.

The Mercury Elite Pro Dual is available in capacities starting from 0GB (add your own drives) to up to 12TB of total storage, adding tremendous capacity to any Mac or PC with a Thunderbolt port. Data rates reach up to 442MB/s read and 450MB/s write, making the them ideal for applications such as AV post-production, photography, music, graphics, data management and backups.

It supports independent drive access for 2 installed drives with hardware RAID, and is ideal for RAID 0, 1, Span and Independent (JBOD) modes.

Ports include two Thunderbolt and one USB 3.0, allowing for plug and play compatibility with legacy Macs, 2013 Mac models, and PCs. Cables and a disk utility software bundle are also included.
