D-Link launches the ShareCenter+ 4-Bay Cloud Network Storage Enclosure (DNS-340L), a self-contained storage solution for SMB customers and prosumers wanting high performance from a self-contained device.

The DNS-340L features 4 hot-swappable drive bays with built-in iSCSI target support and 7 RAID configurations (JBOD, RAID 0, 1, 5, 10, 1+0). It supports 3.5-inch SATA HDDs up to 6TB in sizes, and is powered by a 1.2GHz CPU and 512MB RAM.

Connectivity comes through x2 ethernet ports, x1 USB 3.0 port and x2 USB 2.0 ports.

As well as simple storage the DNS-340L acts as small multi-functional server handling media and print serving, FTP server, download and backup centre, photo and audio centre and surveillance. It also handles private cloud duties through integration with the mydlink cloud server.

Customers can access files through free iOS and Android apps.

The DNS-340L is available now.
