Seagate announces the IronWolf Pro-- a NAS HDD aimed at small-to-midsize enterprises wanting manage large amounts of data, as well as workload rates reaching up to 300TB per year.

Designed as an everything business NAS, the IronWolf is optimised with AgileArray to enhance performance in file-sharing, backup and private cloud environments. The technology helps balancing through dual-plane balance and rotational vibration sensors, RAID optimisation for increased performance and advanced power management.

The company also includes its Rescue Data Recovery service to cover accidental damage, as well as damage caused by natural disasters of the fire or flood variety.

"An extension of Seagate's Guardian Series of 10TB hard drives launched in July, the IronWolf Pro gives businesses greater durability and agility to run their heaviest workloads in large, multi-user NAS environments," the company adds. "With the added peace of mind of Seagate Rescue, businesses can know their data is safe."
