QNAP Joins Backup Forces With ElephantDrive

Written by Marco Attard
08 December 2016

QNAP forms a partnership with ElephantDrive to integrate the latter's cloud backup solution with the former's storage hardware, specifically the latest 64-bit QNAP NAS.

According to the two companies the solution enables direct backups from NAS to the cloud, and unifies local and cloud storage for a superior user experience. ElephantDrive also includes administrative tools for data versioning and archiving, and allows file access and sharing from the cloud anytime and anywhere, on any device.

"ElephantDrive provides excellent functionality and greater choice for QNAP NAS users to protect their data," QNAP says. "We are eager to work with ElephantDrive to further improve the backup options and features available to QNAP NAS users."

QNAP users can download the ElephantDrive app from the QTS App Center.
