

Extron's UTS 100 Series Under Table Shelf System

Written by Roger Douglas
29 April 2013

The Extron **UTS 100 Series Under Table Shelf System** is a self-supporting, half rack width shelf designed for use in environments where a traditional equipment rack or cabinet cannot be located beneath a table top or other furniture surface.

The compact, 1U modular shelf system mounts directly to the under-surface of the table top, without rack rails, and supports any combination of half, quarter, and eighth rack products. The UTS 100 Series can be placed next to a table leg, in the center of the table, or within reach of the system user at the table's edge.

The UTS 100 Series Under Table Shelf System leverages Extron's expertise in half rack width shelf systems and is consistent with the current standardization efforts jointly sponsored with Middle Atlantic.
