The ICE Cable Systems Cat-5e and Cat-6 product range gets HDBaseT certification, meaning the cables can perform as per HDBaseT Alliance specifications.

The HDBaseT 5Play feature set carries uncompressed HD video, audio, ethernet, power and control signals over a single LAN cable.

"We want to help installers do it right the first time so they can move onto other areas of the job," ICE Cable president Brian Rizzo says. "ICE Cable has spared no expense in the making of our product— from the quality and quantity of copper and compounds we use, to our tangle-free dispensers."

ICE Cable Cat-5e/6 products are also UL Listed, ETL verified and RoHS compliant. The company sells cables in 305m bulk cartons, with REFLEX II packaging promising installers can pull the cable without fear of tangling.
