

Intel Powers Terastation's New Generation

Written by Marco Attard
14 January 2011

Buffalo announces its Terastation Pro line of network storage solutions-- building on the previous Terasation lineup.

The Pro line carries Intel Atom D510 dual-core processors with Buffalo's SMB software suite and business class features.

Features include Active Directory support, disk quota support, data replication with device failover, dual gigabit ethernet ports, hot-swap HDDs and x10 NovaBackup Business Essentials licenses.

The line's x5 models are also scalable up to 24TB and ship in RAID 6 (with support RAID 0/1/5/10 as well).
