"There were some distinct factors that produced the final results for 2016," the analyst remarks. "Hyperscale data centers (e.g., Facebook, Google) grew and, at the same time, drove some significant server replacements. Enterprises grew at a lower rate as they continued to leverage server applications through virtualisation and in some cases, service providers in the cloud."

All regions other than Asia/Pacific see Q4 2016 declines, with MEA showing the largest revenue decline at -14.7%.
