Connectivity solutions provider Lindy announces 4 "Cable Lines"-- products designed to meet "the complex requirements of a variety of AV & IT applications in any environment."

The Cable Lines are the Gold Line, Chromo Line, Anthra Line and Black Line. Each line offers technical and design features to meet the needs of a particular application. Thus, the Gold Line is designed for demanding industrial and AV, Chromo Line is suitable for prosumer and public-facing commercial applications, Anthra Line is perfect for professional AV applications and Black Line is developed for home and small office use.

"Through a "form follows function" philosophy, we can create clarity and focus on the relevant information a customer needs to create their perfect application" Lindy says. "Cable Lines utilises years of experience in connectivity solutions, and its this experience that has created a function and strategy surrounding these products that is unique in the market"

The Cable Lines cover DisplayPort, HDMI, DVI, USB 3.0/3.1 and USB 2.0. Available lengths differ according to standard and Cable Lines, ranging from 15cm to 25m. Lindy says all cables are engineered with premium features, including completely sealed connectors in PVC or metal, heavy-duty internal strain relief, improved double or triple layer shielding and high purity copper conductors complete with Mylar foil and dense copper braid shielding.

The Gold Line cables ship with a 25-year warranty, while the other cables have 10-year warranties.
