D-Link unveils the DAP-2565 AirPremier, describing it as a secure network management solution for SMBs with limited IT resources.

It delivers IEEE 802.11n performance, PoE support and secure guest access and control priviledges for individual users.

Selectable 2.4/5GHz dual-band provides flexible IEEE 802.11n performance to up to 300Mbps, while including integrateed 802.3af support and central management capabilities D-Link says improve uptime and cost-effectiveness.

The plenum-rated metal chassis is flame retardant, with low smoke production for placement in air passageways.

The package comes with a one-year subscription to CloudCommand, the D-Link subscription-based cloud service allowing end users, VARs and MSPs to set up, secure and remotely manage wireless networks with multiple access points over an online portal.
