Blue Coat Systems announces ProxyOne, its first web security appliance aiming for SMBs.

ProxyOne provides protection without security expertese, as it integrates web filtering, inline malware/anti-virus scanning and on-box reporting.

The appliance uses Blue Coat's cloud-based WebPulse for web threat protection and provides on-box activity reporting-- both features extending to remote users (through ProxyClient software). It also prevents video floods through stream-splitting and caching technologies.

Pre-configured policies and automatic software/security updates are also included.

The product covers 500-1500 seats (100 minimum, 2000 maximum).
