

The Untangle Firewall Appliance for the Small Office

Written by Marco Attard
12 May 2016

Security vendor Untangle presents the u25 and u25w-- a pair of firewall appliances designed for home or small offices the company describes as "the smallest footprint of any network security appliance in the market."

The u25 is the wired model, while the u25w is the wireless option. Both promise quiet desktop operation, and feature an HDMI port, x3 gigabit ethernet ports and x2 USB ports to provide all required network security features.

Protection comes through unified threat management (UTM) complete with the latest Untangle NG Firewall release (v 1.2), and customers can manage internet traffic by application, website, port and protocol on a per-use or per-group basis. VPN capability provides seamless connectivity to corporate networks, while a captive portal is included with the wifi model.

Untangle also adds bandwidth control, WAN balancing and failover for optimum QoS.

The u25 and u25w are available now.
