Logitech updates its Alert digital video system, aiming at small business with the B700i and B700e PoE security cameras.

Both models carry a 720p camera (with 130-degree lens), built-in microphone, professional-grade wall mounts, 2GB MicroSD card (for storage) and free live remote viewing on PC, Mac or smartphone (via iOS, Android and Blackberry apps).

The B700e model is also weatherproof and IP55 certified, and comes with HD night vision.

Logitech says setup is relatively easy-- install the Logitech Alert software before connecting the system to your customer's network via 48V PoE.

Also available is Alert Commander-- an optional premium service allowing users to manage settings and alerts from web-enabled devices such as smartphones.
