

ServSwitch Switches Go Military-Grade

Black Box announces its latest ServSwitch Secure KVM with USB switches at Washington's FOSE 2011 conference, now featuring additional military-grade security.

The switches come in 2- and 4-port desktop DVI or VGA models and offer control and separation of either 2 or 4 PCs connected to both secure and non-secure networks through a single keyboard, mouse and monitor.

Meanwhile their low-emissions profile prevents data snooping through electromagnetic radiation detection.

Two of the VGA models also support keyboards with integrated Common Access Card (CAC) readers-- a feature making them meet HSPD-12 requirements.
