

CoSoSys Endpoint Solution for Windows 7, Snow Leopard

Written by Bob Snyder
15 October 2009

CoSoSys announces a new version of Endpoint Protector 2009, claiming its the first device control solution fully compatible with Windows 7 and Snow Leopard.

With an easy to use interface for both system administrators and PC users, it allows IT departments to take control of the devices' internal use, track all data transferred in or out of the protected network and enforce encryption of data in transit on portable devices.
