

Bosch Upgrades DiBos Hybrid Video Recorder

Written by Bob Snyder
09 December 2009

Bosch Security Systems releases new software for its DiBos Hybrid Video Recorder.

Among other features, Release 8.7 offers optimized widescreen 16:9 support comprising seven new views in a special widescreen layout.

In combination with popular widescreen displays such as the Bosch 42RTH 42-inch high-performance LCD monitor, the enhanced display capability now available on the DiBos Hybrid Recorder can offer superior video surveillance complying with the current standard for LCD monitors. DiBos Release 8.7 also offers Trivial File Transfer Protocol (TFTP) support for Bosch megapixel IP cameras, which delivers a higher and more stable frame rate performance than Hypertext Transfer Protocol (HTTP).

In addition, the digital zoom function has been enhanced with the new release. Video images are now capable of providing 7 instead of 3 digital zoom steps, making zooming-in much smoother than previously.

It is now possible to configure the recorders remotely either via the remote receiver software or via another DiBos recorder.
