Designed and made in Germany, Geutebrueck's adds 4 more models to its **TopLine** range of progressive scan IP cameras.

Besides the MJPEG and MPEG-4, these dual-streaming cameras support Geutebrueck's H264 CCTV specialist security process (unlike most H264 implementations, this plays back fluid motion video, forwards and backwards, frame by frame).

Two models are 5-megapixel box cameras with 1/2.5" CMOS sensors. TopBC-1123 is a colour camera and TopBC-2123 is a day/night camera. Both provide full resolution (5MP / 2560 x 1920 pixels) video at up to 9 fps.

The other new models are fixed view, day/night, dome cameras with 1/3" CMOS sensors and integral 2.8 mm to 10 mm zoom lenses (full HD+ resolution at 2.7MP / 1920 x 1440 pixels at up to 30 fps). TopFD-2228 has an IP 66 vandal-resistant housing and TTopFD-2125 has standard housing.

TopLine cameras can be powered either from local low voltage or centrally with PoE.

All four newcomers share automatic camera features: flicker reduction, AGC, exposure, electronic shutter, back light compensation, and white balance. They support electronic PTZ
