

Arrow Cloud Gets French Certification

Written by Marco Attard
06 June 2013

The French Ministry of Health hands the highest level of certification to the Arrow Electronics hosting subsidiary, Asplenium, for the hosting of health data.

The certification allows Asplenium to offer a heightened service and comprehension for the business needs of hospitals and retirement centres. It will also provide round-the-clock support and disaster recovery plans boosted through cloud-based offers from Arrow (Arrowsphere).

Asplenium will take care of implementation and management of critical application, patient data management and administrative management of health facilities for major clinical groups, including Ramsay Santé (Ramsay Health Care), and a number of hospitals.

"Arrowsphere, in combination with Asplenium, uses the latest innovations in IT (cloud) to provide a vertical, sectional approach and expertise in the domains of health as well as finance and logistics," Arrow says. "It is now in a position to definitively establish itself as the cornerstone of a French ecosystem, which puts application editors (ISVs) in contact with companies requiring highly specialised vertical application solutions on demand."
