Softec launches its Altair fleet management software as a cloud-based service.

The SaaS allows corporations or inviduals to view, manage and optimise the use of any type of vehicle in real time through internet browser.

It comes in 2 versions-- Altair Sky (for private aviation, air cargo and charter companies) and Altair Ground (for ground and sea transporation companies).

The system is scaleable as one requires.

Being SaaS, the service only requires a monthly fee. It comes in 2 modules-- Live tracking and Fleet management.

The company also offers 3 different heavy duty GPS tracker models.
