

An App to Identify Cloud Costs

Written by Marco Attard
08 May 2015

Dublin-based Auxilion presents ZureView a Microsoft Azure app for organisations wanting to identify and track cloud computing costs with real time consumption reports and Total Cost of Ownership (TCO) analysis.

Designed for enterprise customers, as well as Microsoft partners and Licensing Solution Providers (LSPs), ZureView provides a simplified breakdown of usage costs and monitors one's profitability within an SaaS web app hosted on Azure itself.

Users do not need to be Auxilion customers to access ZureView.

Auxilion says the Azure platform currently counts 450000 customers, a number growing by over 1000 per day. The platform also hosts 275000 websites receiving a total of over 1 billion daily requests.

ZureView is available now.
