Tech Data launches a cloud-based solution on Microsoft Azure designed for SMB customers--the Small Business Cloud Server, a scalable IT platform promising to be flexible, cost-effective, and easy to deploy and manage.

The services comes in 3 sizes, 1-6 users, 7-20 users and 40+ users. Resellers get detailed monthly usage and billing information via the StreamOne cloud provisioning and billing platform, and one can also set usage thresholds and limits if required. The Small Business Cloud Server package includes with a Microsoft Azure virtual machine, Microsoft Office 365 (Exchange, Office and SharePoint), backup, storage, VPN functionality and optional remote desktop capability.

The StreamOne platform promises quick setup, with easy user addition and removal. Resellers can deploy and manage servers remotely for swift and inexpensive setup services.

"Small and medium-sized businesses are now starting to embrace the cloud with real enthusiasm," Tech Data says. "Many users have already migrated to Microsoft Office 365, and there is a massive opportunity now for resellers to move small business servers onto the Microsoft Azure platform."
