Citrix Systems and Google announce an expansion of their existing cloud partnership-- allowing Citrix Workspace Services to run on Google Cloud Platform, while adding further integration between the two companies' services.

For instance, ShareFile and G Suite integration allows the secure sharing of files via Gmail and a ShareFile connector to Google Drive. Meanwhile Google developers can utlise containers and the Kubernetes orchestration system within NetScaler CPX to easily build and scale secure applications on the cloud.

Citrix Receiver for Chrome is also getting additional enhancements, including multi-monitor support, ensuring Chrome OS devices remain a secure endpoint solution for the deliver of virtualised apps and corporate data.

“Companies of all sizes across all industries around the world have an amazing opportunity to embrace cloud transformation and empower their people to work securely from anywhere using digital workspaces,” Citrix says. “Our customers are asking Citrix and Google to work more closely together to deliver innovative solutions from the cloud to help them embrace the future of work.”
