

Data management vendor Informatica announces an update of the integration Platform as a Service (iPaaS) solution-- Informatica Intelligent Cloud Services, built on a modular microservices architecture.

According to the company, Intelligent Cloud Services offers a unified user experience across iPaaS integration patterns. The modular architecture is customisable and easy to navigate, while the CLAIRE engine provides AI metadata-driven recommendations to automation and accelerate integration and data management work.

Security is also included through compliance with regulations such as HIPAA and certifications including SOC2 type II and SOC3, among others. Intelligent Cloud Services can also be used as part of a solution compliant with the upcoming General Data Protection Regulation (GDPR).

“Transformational CIOs recognise that it’s more than the IT team that needs access to data. The demands of their business leaders are changing and Informatica Intelligent Cloud Services allows for easy access, growth and scale as required,” the company says. “Informatica Intelligent Cloud Services is the most advanced cloud data integration solution and it provides enterprises with what they need to power their data-driven digital transformation.”
