SAP announces a partnership with Dell EMC-owned cloud services provider Virtustream-- one putting the SAP Data Hub data operations management solution on the cloud via the Virtustream Enterprise Cloud.

According to the two companies, SAP Data Hub and Virtustream Enterprise Cloud enable customers to accelerate and expand data flow across the organisation from a single locations. Customers can get up and running quickly with a comprehensive solution installed, managed and maintained by Virtustream, giving IT teams more time to focus on strategic business solutions.

“We are evolving our solution through the addition of SAP Data Hub, which brings the latest in big data management capabilities to the cloud experience our customers know and love,” Virtustream says. “Our partnership with SAP means customers can now manage mission-critical big data workloads and cloud native workloads easier than ever before, which allows them to scale their big data solutions.”

The Virtustream Enterprise Cloud is designed to run mission-critical enterprise applications with a full suite of professional services. MicroVM cloud resource allocation and management technology allows fine-grained compute, memory, network and storage measurement, ensuring customers pay only for resources used. Also included is a range of industry-specific and government certifications, creating a trusted environment for even the most sensitive data.

The announcement is part of a wider series of SAP-Virtustream collaborations, following the expansion of the SAP HANA Enterprise Cloud through the addition of a M. East and APJ regions.
