

A Central Portal for HPE's GreenLake

Written by Marco Attard
05 December 2019

HPE continues to build on the promise of an edge-to-cloud portfolio-as-a-service with GreenLake Central, a front end and control plane providing a consistent experience throughout the entire GreenLake platform.

According to the company, GreenLake Central gives customers a unified experience across public and private clouds, the datacentre and edge workloads, bringing lower costs and risks as well as greater control and choice. HPE delivers the single operational console as-a-service, and customers can choose the tools to use, as well as where and how to place workloads, before paying for what they exactly consume.

"HPE GreenLake Central is a transformative platform that changes the game in hybrid IT," the company says. "With this offering, every user in a company gains access to a unique console from which to run their organization and achieve powerful business outcomes. Now the CIO can operate as a strategic service broker, and everyone benefits from a consistent cloud experience, resulting in lower costs and risks, and greater choice, control, simplicity, and

speed.”

HPE adds GreenLake is one of its fastest-growing businesses, counting over 740 customers worldwide. It also claims the channel generated over 200% order growth for GreenLake, marking further strides towards the company's plans to offer its entire portfolio as-a-service by 2022.
