SpamTitan Technologies releases a cloud-based version of anti-spam and anti-virus virtual appliance, SpamTitan.

The company says the appliance's On-Demand version takes advantage of cloud technologies in order to provide performance without using local resources or virtualisation software, making it ideal for SMBs.

Being a single tenancy cloud-based appliance users can configure SpamTitan On-Demand to their requirements within minutes, using a single link to access a hosted SpamTitan virtual appliance.

The company also provides a free 30-day day trial on its website.
