---

WolfVision introduces its 4th generation VZ-8 Series Visualizers. These new units come with a redesigned housing, 14x optical zoom capability and feature a native 1080p HD camera.

Besides the native 1080p HD resolution at 30 fps (frames per second), new features include a basic LAN port and HDMI input and output. With the optional Feature Pack the VZ-8light4 can be upgraded to include infrared remote control, USB host port functionality, nine image internal memory and external image memory capability.

The new VZ-8plus4 is the **world's first Visualizer with a frame rate of 60 fps at native 1080p HD resolution**, allowing for smoother motion and faster autofocus than ever before. Other new features, compared to the previous model include an LCD live preview monitor, enhanced LAN/network features such as Unicast and Multicast streaming of live images directly from the Visualizer in popular streaming modes like H.264, and all the new features of the VZ-8light4 with the optional Feature Pack.
