

Elisa Offers Microsoft's Cloud

Written by Marco Attard
08 April 2011

Elisa becomes Finland's first operator to offer Microsoft's cloud services, following an agreement to launch with Office 365 solutions later this year.

The agreement allows Elisa to retail Microsoft's cloud services-- as well as incorporate them within its own service range, including packaging cloud services into network services within a single contract.

Office 365 is currently in beta, and brings together Office, SharePoint Online, Exchange Online and Lync Online. Elisa managed to get the Microsoft agreement thanks to its partnership with Vodafone.
