

Econocom Brings the Robots!

Written by Marco Attard
28 July 2017

Econocom presents Econobots-- a business unit dedicated to service robotics, a market IDC says presents a growing opportunity thanks to developments in AI and the cloud.

In fact, the analyst predicts the robotics market will grow at a CAGR of over 20% over the next few years. The robots serviced by Econobots include those used in sectors such as manufacturing and e-commerce, as well as healthcare, logistics, food and transport.

Leading Econobots are David Lemaitre and Grégory Lebourdais, together with founder and director Chockri Baaziz. Both worked for EOS Innovation, the service robotics specialist that co-developed "Captain DC," a roboticised datacentre maintenance and surveillance assistant, with Econocom in 2016.

"Creating Econobots will firmly establish Econocom in robotics, pioneering technology in the digital world that has become essential for today's society," Econocom says. "This unique approach will enable us to address the market in an innovative way with an end-to-end offering."
