

AirScreen MT for Business Collaboration

Written by Bob Snyder
10 June 2014

Paired with iStick Mini Computer, **PQ Labs AirScreen technology** delivers your presentation to the large screen over the air.

You can have a multi-touching conference which involves everyone in the meeting room with PQ Labs Overlay paired with AirScreen

AirScreen technology instantly makes your desktop computer into your private cloud, and you can use its computing power anywhere you go. You'll never need to carry your 2kg laptop for presentation on customer's site. All you need is a finger-sized iStick Mini Computer in your pocket equipped with AirScreen Technology.

One-touch switching up to 32 users: the host display can synchronize to either user's image content with a single touch or click, and reflects every move to the rest participants of the meeting, so it's absolutely touch interactive and engaging.

AirScreen delivers real-time 1080p HD Video and it can be conveniently run in a wireless environment.
