

KLIK Intros New Wireless HD Streaming Box

Written by Roger Douglas
25 January 2016

KLIK Communications just launched the **KLIK Boks Wireless Presentation Connector** — a device that wirelessly streams the contents of their laptop, tablet or smartphone to a projector or monitor for \$249.

Similar to the now-ubiquitous video streaming sticks available for consumer use, the **KLIK Boks** targets corporate meeting and conference rooms, classrooms and meeting spaces with a host of what they claim are “professional-grade features.”

KLIK Boks includes both HDMI and VGA connectivity.

The company says it has developed "SmartSense detection technology" that automatically matches the display settings between the laptop and the screen (i.e., EDID).
