Acer announces the Chromebase 24 for Meetings-- a Chrome OS-powered all-in-one videoconferencing solution featuring all the hardware, software, software and support required for virtual meetings.

Designed for smaller meeting areas with up to 2 users, the Chromebase 24 for Meetings features a 24-inch 1920x1080 resolution touchscreen, adjustable (by 5-30 degrees) HD camera, 4 microphones and 2 stereo speakers. Acer does not provide further hardware specifications, but the device's similarity to previously announced Chromebase 24 AiO PC suggests it runs on an Intel Core chip.

On the software side everything is provided through Google Apps, with Hangouts allowing for up to 25 meeting participants on a wide array of devices, including PCs, tablets and smartphones.

The Chromebase 24 for Meetings is available now in the UK and Ireland, with more countries to follow.
