

Yealink & Zoom Launch Conference Room Solution

Written by Bob Snyder
31 May 2016

Yealink announces a solution with Zoom that weds the **Yealink VC110 All-in-One video conferencing endpoint** and **Zoom's cloud-based HD video communications software**

.

Yealink also launched a new tailored **One-Button Meeting Access** function with its VC110 to reinforce the joint solution. Their solution targets small (4-6 people) to medium-sized (12 people or less) meeting rooms--although both Yealink and Zoom solutions work for rooms of all sizes.

Zoom unifies cloud video conferencing, simple online meetings, group messaging and a software-defined conference room solution into one easy-to-use platform. To solve the challenges of different-sized meeting spaces and to address the concerns of growing businesses, Yealink's VC110 provides 1080P Full HD video experience with ease of installation, deployment and usage.

Yealink VC110's all-in-one camera and codec design enables a small footprint with only three cable connections required (VC110 with Pod). Instead of complicated firewall configurations, the model gives users Plug-and-Play convenience with Yealink's Intelligent Firewall Traversal technology.

Yealink VC110 also offers multiple advanced hardware features such as dual-screen support, super-HD audio, wide-angle video camera (75° FoV), one-button USB recording and more.

“While Zoom is flexible and powerful enough for large conference and training rooms, we have seen the prevalence of smaller huddle rooms in recent years, and we know that most of these spaces are woefully unequipped to handle the needs of today’s workforce,” says Oded Gal, Zoom’s Head of Product. “By working together with Yealink, we can empower more teams with collaboration spaces that are enabled with video, audio, and screen sharing.”
