

Revolabs Conference Phone Gets Chrome Interoperability

Written by Marco Attard
24 June 2016

Revolabs announces the FLX UC 500 USB conference phone now has full integration and interoperability with Google Chrome devices for meetings.

The result is an integrated video conferencing solution with calling functions (such as answer, hang up, volume control and mute) fully synchronised between Chrome OS, Chrome devices for meetings and the FLX UC 500 conference phone.

The FLX UC 500 has 4 built-in microphones providing 360-degree coverage for full audio capture, with no need to huddle next to microphone pickups. Further ensuring clear conversation flow are full duplex audio support, echo cancellation and background noise filtering.

“The interoperability of our FLX UC 500 conference phone with Google Chrome devices for meetings is a great benefit for customers who are looking for a total solution that enables the best meeting environment today’s businesses demand,” Revolabs says. “With this integration, users now have access to a premium audio solution that’s easy to use and enables natural, clear conversations.”
