

The developer of video wall management software, **VuWall** jumps into the meeting room with the launch of **CoScape**, a wireless presentation system designed for meeting rooms.

CoScape allows easy collaboration and sharing of computer content on a video wall, a large monitor or a projector-- whatever device you customers are using, be it a laptop, a smartphone or a tablet.

With CoScape, there are no cables cluttering the meeting room table and no training is required to understand how it works. Just plug and go.

The user who wants to give a presentation enters the meeting room with the presentation on, for one example, a laptop. They connect your laptop to the WIFI network of the room. Insert a CoScape USB key in your own device (laptop in this example). And the content from the laptop appears on the video wall (or projection screen)

Any other person in the room can connect his or her laptop or mobile device to the WIFI of the room, then insert another CoScape USB key and join the screen – just like you, as the first

VuWall Launches CoScape, Wireless Presentation System

presenter, did seconds or minutes before. The same scenario repeats itself as many times as you want.

As Paul Vander Plaetse, President of VuWall adds, "The number of participants and the number of simultaneous windows on the wall, is only limited by the number of users who want to share content."

In other words, in no time, you can have x presentations on the screen and all presenters have the ability to use the CoScape application to freely move each window around on the screen. They can also close, reopen and swap windows with the goal to conduct the meeting in a hassle-free cooperative way.

Go CoScape
