Imagine that you walk into a meeting room, plug-in a ClickShare button and present.

The display or projector turns on, the screen comes down and the sound turns on all without any other actions. Just plug-in and present. What could be easier than that?

Now Neets Control Systems (EcHo Plus, SieRRa II, AlFa II, DelTa) integrate with Barco ClickShare: they can detects the signal on the USB button and send a Power On and Source command to the screen or projector.

Neets provides complete room functionality and makes sure you get started without any frustration. When finished simply disconnect the ClickShare Button and turn off the AV equipment.

The **Neets Project Designer software** for configuring these Neets Control Systems is a drag and drop based software: you drag the devices you need to configure from the extensive device driver library to your project.

You can create your own graphical user interface or use one of the many templates to simplify

control of the meeting and conference room. You can even make your own labels for Neets Control Systems in Project Designer.

Important to note: Barco ClickShare CS-100 is not supported for specific interface reasons.

Go Neets Control Systems and Barco ClickShare Together
