MXL Microphones introduces a USB-powered tabletop web conferencing microphone-- the MXL AC-360-Z, a co-development with web conferencing and communications software provider Zoom.

Designed to enhance the microphone solution for Zoom Rooms and Zoom-enabled conference rooms, the AC-360-Z expands on the AC-404 three-capsule boundary microphone through a full 360-degree pickup. As a result, when placed at the centre of a large conference table the AC-360-Z should ensure everyone is clearly audible.

The AC-360-Z is compatible with any Mac or PC device through simple plug-and-play connectivity, with no need for any drivers. When used with Zoom each quadrant of the AC-360-Z acts as an independent device for optimal performance and fidelity. Customers can link up to three devices to cover any room, and each microphone ship complete with cables and mounting options.
