TrueConf and Yamaha announce the full compatibility of TrueConf software and Yamaha YVC series speakerphones, part of a partnership designed to "improve videoconferencing quality in meeting rooms worldwide."

Thanks to the partnership, TrueConf has certified Yamaha YVC-1000 and YVC-300 conference speaker phones and ensured full compatibility with TrueConf software. In addition, TrueConf provides additional integration allowing TrueConf users to remotely control hardware microphone buttons in Yamaha speakerphones.

Customers can connect YVC series speakers to PCs, smartphones, tablets and legacy videoconferencing systems, and optimise audio settings with a single touch. Yamaha solutions ensure high sound quality on multiple channels by mixing several audio sources connected to different inteferfaces, and use DSP processing technologies to create a productivity enhancing environment for business communication.
