

ScanSource Brings Together Oblong, LG, Cisco Meeting Tools

Written by Frederick Douglas
27 July 2018

ScanSource announces a distribution agreement bringing together the Oblong Mezzanine immersive collaboration solutions, LG displays and Webex Room Kit series products from Cisco into a pair of bundle offerings.

The entire Mezzanine product family includes the 600 series for larger conference rooms and briefing centres and the 200 series solution for smaller teams and spaces. The Mezzanine USP is a gesture-based UI making it easy for collaborators to share and control multiple content streams simultaneously, and the bundle enables users to use the control system across the Cisco Webex virtual meeting platform.

As such, the integrated, ScanSource-developed offering brings the Cisco Webex Room Kit and Webex Room Kit Plus Collaboration Endpoints into the Oblong Mezzanine collaboration platform, and uses LG UH5C series commercial UHD displays.

Initially the bundle is available in 2 sizes mapped to the Mezzanine 200 series with dual LG displays for smaller team collaboration and the Mezzanine 600 series for more immersive environments wrapping a room.
