

Vaddio Launches PrimeSHOT 20 PTZ Camera

Written by Marco Attard
17 August 2018

Following an InfoComm 2018 debut, Vaddio launches the PrimeSHOT 20-- an HDMI camera offering 1080p/60 image quality aimed as a replacement for existing standard definition PTZ cameras or an initial system upgrade.

The PrimeSHOT 20 is ideal for large conference rooms, lecture halls and houses of worship, with superior low-light performance accomodating dimly-lot locations. It features 20x optical zoom, 55-degree horizontal field of view and simultaneous HDMI 1.3, 2-Video and IP streaming outputs, together with an intuitive web-based UI for remote configuration, management and control.

The camera is available either stand-alone or as a bundle with HDMI extenders. The cost-effective extension option pushes 1080p/60 signals up to 50m using one CAT5 (or better) cable.
