

InFocus Updates Mondopad Line

Written by Frederick Douglas
19 October 2018

InFocus launches a selection of 12 Mondopad collaborative display solutions, each designed around the specific needs and budgets of various office environments and meeting spaces, divided under the Core, Launch and Ultra lines.

Available in 55-, 65-, 75- and 86-inch models, each Mondopad line offers something for every space, including lecture halls, boardrooms or small huddle spaces. Every tier also has features specific for various use cases and environments, but all 12 models are based on a touchscreen collaborative system with a digital whiteboard, wireless casting for document, photo and video viewing and annotation, as well as web browser.

Mondopad Core offers essential collaboration tools without cluttering the UI with unnecessary apps. It represents the affordable baseline, and as such is ideal for small businesses, government agencies and huddle rooms. The 4K touchscreen has embedded Android and a suite of tools for casting, whiteboarding, viewing documents and web browsing. Users can also send the results of collaboration as common or secured files by email or over office network, as well as save to a USB or cloud-based service such as DropBox.

Customers can upgrade the Core to include a PC platform with 7th generation Intel i7 processors to build a more powerful Windows 10-powered touchscreen solution.

Mondopad Launch is designed for organisations like universities and government agencies in need of easy access to shared software and tools, such as videoconferencing, presentation apps and project management software. A configurable solution for group workspaces, it adds a 7th generation Intel i5-based Windows 10 Pro PC and additional customisation options.

A lock-down feature allows users to easily login and quickly access required apps through a customisable home screen, while a 4K camera and Quicklaunch (standard or professional edition) provide videoconferencing. Quicklaunch provides access to scheduled video calls via large button within the calendar appointment. The Launch also offers DisplayNote Montage, with casting from laptops or mobile devices from to up to 6 users.

The most premium version is the Mondopad Ultra. Built on a 7th generation Intel i7-based Windows 10 Pro PC, it features an integrated collaboration suite complete with videoconferencing, whiteboarding, casting, web browser and the full Microsoft Office suite. Also included are a 4K camera, microphone, wireless keyboard with integrated touchscreen and a ConX Cloud subscription.

Users can launch ConX Whiteboard when signed onto ConX Cloud or any other videoconferencing solutions to interact and share ideas on a Mondopad Ultra whiteboard simultaneously. One can securely connect and share content form any computer or mobile device, including PCs, Macs, tablets or smartphones, and remotely control the Mondopad screen from the device.

The Mondopad Ultra also includes the Mondopad Ultra v3.0 software and mobile app, allowing users to start meetings and get to work faster. Logging into Office 365 provides access to all emails, attachments, calendar and documents stored to OneDrive or SharePoint, and the v3.0 software is compatible with all Mondopad Ultra generations.

All 12 Mondopad models are available now together with a range of accessories, such as the SimpleShare Presentation System, Thunder Speakerphone and mounting solutions for wall, floor and mobile applications.
