

Avonic Launches CM20 Huddle Camera

Written by Frederick Douglas
30 November 2018

Avonic announces the CM20-VCU-- a high-quality 4K camera with a built-in microphone array, integrated auto-framing, digital PTZ (with selectable presets) and a 120-degree viewing angle.

Aimed at videoconferencing and recording applications in huddle and meeting rooms, the CM20 provides presets allowing users to capture a whiteboard or flip-over and switch between presets during a meeting. The wide angle lens and auto-framing functionality ensure every participant is in the frame, and a multi-use mount compatible with almost any monitor screen is included.

The built-in microphone array has a 4m pickup range, and the camera provides a concurrent USB 3.0 and HDMI output. Both outputs support different resolutions, reaching up to 4K30 using HDMI.

The camera is available now, and ships with a remote control, USB 3.0 cable and USB power supply.
