

Extron Ships HC 404 Collaboration System

Written by Alice Marshall
04 April 2019

Extron announces the availability of the HC 404 Meeting Space Collaboration System-- a means to provide a one-touch user experience for conferencing, collaboration and AV room control.

The HC 404 extends control capabilities to Zoom Rooms, and a single interface on an Extron TouchLink Pro series touchpanel is all a customer needs to control every conferencing and audiovisual function. It combines video switching, scaling, signal extension and system control into a transmitter and receiver pair seamlessly integrated with a variety of room configurations.

Common functions such as display power and source switching are automated, and users can quickly share projects by simply connecting a laptop, tablet or other source device.

"The HC 404 with Zoom Room control brings enhanced capabilities for convenient management of conferencing and room functions," Extron says. "Customers deploying multiple Zoom Rooms can now save time and money by ordering this powerful collaboration solution preconfigured at no additional cost."
