According to Logitech, the Personal Collaboration Kits not only allow users to collaborate from the workspace, but they can do so while all distractions are blocked out, even while working within an open office space.

A recent study of 1500 employees by ResumeLabs suggests companies offering an open layout with some private offices have high employee morale. However, while open office plans provide a collaborative work environment and increased job satisfaction, some employees still need to take calls and private meetings from their desk.

Enter the Personal Collaboration Kit, a package consisting of a Zone Wireless Headset and a Logitech office webcam. A Pro version includes a BRIO 4K webcam, while the regular variant has a C925e webcam. Both solutions provide a streamlined video collaboration experience from any workspace, are business-certified for Microsoft Skype for Business, and work with other popular applications such as Zoom and Google Voice/Hangouts Meet. In addition, the Pro kit

supports Windows Hello secure login.

Logitech says the Collaboration Kits allow users to hold video conferences straight from a desk or personal workspace, without need for a huddle room. The Zone Wireless Headset promises to tune out surrounding noise or hear the other person more clearly with a flip-to-mute mic, while the webcams make videos feel like face-to-face meetings.
