

PTZ camera manufacturer and AV event capture and recording system maker Avonic will be at ISE 2020 to demonstrate how customers can make use of its flexible, low latency solutions in education and conferencing.

At the show Avonic will preview the CM22, a fixed camera for small meeting and huddle rooms. It mounts easily either on top or below a screen, and is ideal for displays with small bezels. It captures images at 4K UHD resolution, and includes microphones for an all-in-one solution. Connectivity comes through HDMI and USB 3.0 ports.

Another product on preview is the CM90, a camera capable of streaming 4K UHD resolution images at 60fps. A fixed install camera designed for proAV applications, it comes complete with 31x optical zoom. Meanwhile the CM70 PTZ series offers features normally found on broadcast-grade hardware, such as HD-SDI, user-adjustable colour matrix and SRT streaming. They also promise "outstanding" image quality even in low light, thanks to a Panasonic high SNR CMOS sensor and digital noise reduction, and image quality reaches up to 1080p60 resolution.

“For us, it’s all about making our customers’ lives easier,” the company says. “We expend considerable design and engineering effort in developing products that are truly state of the art in terms of functionality and performance-- but our real advantage lies in what we do to achieve the simple installability and interoperability that enable integrators and end users to achieve complete solutions with less effort and expense, and in less time.”
