

MEDIALINE's Sound+Voice DONUT

Written by Marco Attard
15 March 2012

Shown at ISE, Medialine's Bluetooth **Sound+Voice Donut** lets you teleconference connecting PC, mobile phone, tablet PC and many more portable devices by applying HQV (High Quality Voice) technology for voice communication.

Medialine calls it the world's only device that works with Apple iPhone 4S with Siri voice commands through stereo speaker and microphone.

Designed with minimized interference layout in between speakers and microphone to suppress echo and background noises, it plays multimedia content by Bluetooth technology from any Bluetooth enabled device.
