

Tandberg Launches Movi 3

Written by Bob Snyder
13 December 2009

Tandberg releases the 3rd version of its pc desktop videoconferencing package, Movi 3.

Movi's new user interface makes it easier to use and more intuitive. However, the key enhancement is the ability to share pc content with other session participants so Movi users not only participate, but they can also host high impact, rich media collaboration sessions.

In combo with Tandberg Video Communication Server, Movi enables any pc to become a business-quality video system that connects users to any other standards based H.323 and SIP video and telepresence system. Paired with the Tandberg PrecisionHD USB camera, Movi enables HD 720p 30fps video.
