

ClearOne Increases Market Share Lead

Written by Roger Douglas
08 November 2015

ClearOne earned an impressive 51.5% share of the 2014 global installed audio conferencing endpoints revenue. The company gained share compared to the previous year, says new research from Frost & Sullivan (**Analysis of the Global Audio Conferencing Endpoints Market**).

ClearOne expanded its product line to enter new and adjacent markets for audio and video applications. Historically focused on installed audio conferencing devices, ClearOne has also entered the tabletop and video conferencing markets.

ClearOne continues to develop and introduce innovative audio and video products for conferencing, collaboration, streaming, and digital signage applications. In 2015, the company launched **CONNECT Bluetooth**, a USB adapter that enables Bluetooth connectivity for all ClearOne conference phones and also provides audio bridging capability that can connect PC voice/video applications and mobile phone calls into a unified group conference.

It also launched a digital wireless microphone that supports **Dante** technology, which ensures maximum privacy and security through radio-frequency digital wireless signal transmission technology.
