ELB (formerly Electroboard) debuts the Prowise-- a native 4K interactive presentation display, digital whiteboard and video collaboration solution. A collaboration board, in other words.

The Prowise features a built-in Windows 10 PC, wide area microphones, soundbar with subwoofer and a 1080p conferencing camera. Mounting comes through either motorised, height-adjustable mobile stand or fixed wall mount bracket. The company says all Prowise panels have a dust-resistant, fan-free silent running design to extend product life, since ventilators and filters are no longer necessary.

The panels integrate with existing ecosystem with support for single sign-on using Microsoft Office 365 and Google Docs, with an NFC chip in the front bezel enabling presenters to sign-in with a card swipe. Also included is support for Windows and Mac gestures, as well as 3rd party room control systems.

The Prowise collaboration board is available in 65-, 75- and 85-inch sizes.
